

DESCRIPTION

The Radiant series VB136 transports HD-SDI (SMPTE 292), SDI (SMPTE 259) or DVB-ASI over fiber optic cable.

The innovative unit can be built with three variations, transmitter, receiver or transceiver for two way connections.

The standard rackmount unit can be configured with an SFP (LC) or other connectors. While the card cage and stand alone module offer an OC48 SFP pluggable LC connection.

The unit offers automatic detection of the input signal from 143 Mbps, 270 Mbps, 1.483 Gbps or 1.485 Gbps. If the signal does not lock the device will automatically bypass the reclocker. The VB136 offers complete status monitoring via front panel LED's.

Automatic cable equalization for up to 100 meters with Belden 1694A at 1.485 Gbps or 300 meters for signals with 270 Mbps.

Like most Radiant products the VB136 can be packaged in a standard 1RU rackmount, a stand alone module/can or housed in the CR200 card cage. In addition -48 power or redundant power supplies are available.
