

## DESCRIPTION

**Radiant Communications**  
**DL221SFP** is a truly universal transceiver, which interfaces with All Ethernet formats and it does not require any adjustments at the time of installation, or anytime thereafter .

These transceivers are available in 2 fiber SFP versions and can connect directly to Ethernet Hubs, Switches, Routers, and even NIC cards. These units operate such that they can be interfaced with any switch or hub port set to any combination of 10 Base-T, 100 Base-TX, Half Duplex, or Full Duplex. The optical transmission, however, is 100 Base-FX at Full Duplex, which means that the only distance limitation is the optical power of the transceiver. The DL221SFP, together with the optional SNMP Management module (DL-SNMP), will enable the remote monitoring of a single unit or a fully loaded card cage of units (up to 8 units).
